RE: Expiration of ML 49448-MP

Gentlemen:

This letter will serve as notice and reminder that Mineral materials Permit No. ML 49448-MP, covering 40 acres of trust lands minerals estate in SW4SW4, Section 17, T20S, R2E, SLB&M, will expire on October 31, 2009. Upon expiration of the permit the permittee will no longer have any rights to extract or remove limestone from the permitted lands. Please immediately take necessary steps to ensure that the quarried acreage is reclaimed by October 31, 2009 in accordance with the mined land reclamation plan on file with the Utah Division of Oil, Gas & Mining. Also please ensure that any outstanding royalties are paid as required by the terms and conditions of the existing permit.

In the event you desire to continue producing limestone from the lands described above you must obtain a new Mineral Materials permit from the Trust Lands Administration, to coincide with the expiration of ML 49448-MP. The issuance of a new permit requires the filing of a new Mineral Materials Permit application with the Trust Lands Administration using the prescribed application form. The new application requires approval by the Director before a new permit may be issued. A new permit for limestone upon the above described lands will require a royalty rate of 10% Gross Value, but not less than \$15.00 per ton for building stone and \$0.75 per ton for crushed aggregate. Responsibility for unreclaimed limestone-mining disturbances in the permitted lands would be transferred to the new permit.

Please notify me whether you plan to reclaim the quarry site at this time seek a new permit to enable a continuation of production.

Sincerely,

John T. Blake
Trust Land Specialist
